

Question	Agenda Item	Raised by	Question Raised	Answer
1	<a href="#">6</a>	D. Hurley	Previous Public Health reports indicated that the CWMP Tier 2 programme would be evaluated, and would be re-procured in August 2017. Has this evaluation been completed and what was the conclusion?	The evaluation is completed. A number of recommendations have been developed from the evaluation to improve the services. The re- procurement process will begin in October 2017.
2	<a href="#">6</a>	D. Hurley	The 2015/16 annual report indicates that of those who had been overweight or obese at the start 69 ANK completers (86%) and 59 STOP completers (68%) did not get worse. How many of these achieved healthy weight upon completion?	From the previous data, of the 69 ANK completers, 7 went into the healthy weight category upon completion of the programme.  From the STOP programme, of the 59 completers, 5 achieved a healthy weight. However, aiming to achieve a healthy weight by the conclusion of the programme is the sole focus of the programme, as many children start the programme well above the 91st centile, and they only grow so much in 12-24 weeks.  For the children to achieve a healthy weight within the programme timescale, a vast amount of weight would have to be lost very quickly, which is something we do not encourage. Having a child reduce or maintain their BMI z score is our primary focus as this supports children maintaining a healthy weight over the longer term.
3	<a href="#">6</a>	D. Hurley	When is it reasonable to expect completers to have achieved a healthy (normal) weight? What is the status of the first completers from Q1 2015/16, that finished showing improvement, now 12-13 years of age?	This is something we can't accurately predict, as every child is different. We strive for weight maintenance, (unless in exceptional circumstances) throughout the duration of the programme, so that as the children grow they will eventually reach a healthy weight.  The service is targeted at children aged between 4-12 years, who each grow at different rates. We do not collect data for children aged 12+ after the 24 week programme..

4	<a href="#">6</a>	D. Hurley	The healthy weight care pathway is described as a 24 week programme, but 12 and 6 weeks references appear in reporting. Has the pathway as originally conceived been executed at all?	<p>Yes. The Healthy Weight Pathway 0-18 is accessible to all children in Barnet who are over weight and obese.</p> <p>The targeted element is a total of 24 weeks. For ANK, 12 weeks are spent completing the programme followed by a follow up at week 12.</p> <p>Between weeks 12 and 24, support is provided to children based on their individual needs. Children can also attend the physical activity sessions of a new programme during this time. A follow up is at week 24 where children are weighed and measured again to monitor progress.</p>
5	<a href="#">6</a>	D. Hurley	Which schools have participated in the STOP programme?	<ul style="list-style-type: none"> <li>• Annunciation Juniors x2</li> <li>• Underhill Primary School</li> <li>• Colindale Primary School</li> <li>• Broadfields Primary School</li> <li>• Sunnyfields Primary School</li> <li>• Holly Park Juniors</li> <li>• Blessed Dominic Primary School</li> <li>• Martin Primary School</li> <li>• The Hyde Primary School</li> <li>• Queenswell Juniors</li> <li>• St Mary and St John Primary School</li> <li>• The Orion Primary School</li> <li>• St Joseph Catholic School</li> <li>• Courtland Primary School</li> <li>• Goldbeaters Primary School</li> </ul>
6	<a href="#">6</a>	D. Hurley	What is Barnet Borough spending annually on this child weight management programme initiative?	£ 211,097 (ANK and HWN)
