

Protecting and improving the nation's health

Barnet

Unitary Authority

This profile was published on 6 September 2016 Revised 9 September 2016

Health Profile 2016

Health in summary

The health of people in Barnet is generally better than the England average. About 16% (11,500) of children live in low income families. Life expectancy for both men and women is higher than the England average.

Health inequalities

Life expectancy is 7.6 years lower for men and 5.6 years lower for women in the most deprived areas of Barnet than in the least deprived areas.

Child health

In Year 6, 18.0% (609) of children are classified as obese. The rate of alcohol-specific hospital stays among those under 18 was 25.0*, better than the average for England. This represents 22 stays per year. Levels of teenage pregnancy, GCSE attainment, breastfeeding initiation and smoking at time of delivery are better than the England average.

Adult health

The rate of alcohol-related harm hospital stays is 488*, better than the average for England. This represents 1,593 stays per year. The rate of self-harm hospital stays is 99.0*, better than the average for England. This represents 379 stays per year. The rate of smoking related deaths is 203*, better than the average for England. This represents 340 deaths per year. Estimated levels of adult excess weight are better than the England average. Rates of sexually transmitted infections and TB are worse than average. The rate of people killed and seriously injured on roads is better than average. Rates of long term unemployment, early deaths from cardiovascular diseases and early deaths from cancer are better than average.

Local priorities

Priorities in Barnet include early years, mental health and wellbeing, encouraging healthy lifestyles and care when needed. For more information see www.barnet.gov.uk

^{*} rate per 100,000 population

Deprivation: a national view

The map shows differences in deprivation in this area based on national comparisons, using quintiles (fifths) of the Index of Multiple Deprivation 2015 (IMD2015), shown by lower super output area. The darkest coloured areas are some of the most deprived neighbourhoods in England.

This chart shows the percentage of the population who live in areas at each level of deprivation.

Life expectancy: inequalities in this local authority

The charts below show life expectancy for men and women in this local authority for 2012-2014. Each chart is divided into deciles (tenths) by deprivation (IMD2010), from the most deprived decile on the left of the chart to the least deprived decile on the right. The steepness of the slope represents the inequality in life expectancy that is related to deprivation in this local area. If there was no inequality in life expectancy as a result of deprivation, the line would be horizontal.

Life expectancy gap for men: 7.6 years

Life expectancy gap for women: 5.6 years

Health inequalities: changes over time

These charts provide a comparison of the changes in early death rates (in people under 75) between this area and all of England. Early deaths from all causes also show the differences between the most and least deprived quintile (IMD2010) in this area. (Data points are the midpoints of 3 year averages of annual rates, for example 2005 represents the period 2004 to 2006).

Health inequalities: ethnicity

Percentage of hospital admissions that were emergencies, by ethnic group, 2014/15

Health summary for Barnet

The chart below shows how the health of people in this area compares with the rest of England. This area's result for each indicator is shown as a circle. The average rate for England is shown by the black line, which is always at the centre of the chart. The range of results for all local areas in England is shown as a grey bar. A red circle means that this area is significantly worse than England for that indicator; however, a green circle may still indicate an important public health problem.
