01/03/2024 Safer Communities Partnership Board Safety in Parks and Greenspaces		
Rationale / Context	Barnet has a great collection of parks and open spaces, used by millions of visitors each year. Our parks vary in usage, size, scale and facilities.	
	In 2023, the Overview and Scrutiny Committee identified safety in parks and greenspaces as a topic for further exploration at the task and finish group. Safety in parks has also been identified as a key theme area following several community safety ward walks.	
	A study on the safety in parks and greenspaces, under three principles of 'Design, Management and Maintenance', will enable us to explore what makes a park feel safe or unsafe. Typically, there are a range of factors that influence this e.g. park reputation, users, familiarity, security, personal experiences etc.	
	 The Serious Violence Strategy and needs assessment is a key legal duty for the Council and highlights the need to: Strengthen partnership working for a coordinated whole system approach to preventing and tackling violent offending in the borough. Pro-actively monitor and tackle disproportionately of overrepresented groups who are affected by violence and build data into key performance indicators and evaluation of all services. Effectively engage and coproduce solutions to local problems with local people. 	
	The study will explore the view of professionals compared with the views of others, in addition to gathering intelligence from a range of identified sources to support any recommendations. Evidence will be taken from a wide range of sources to provide a strategic analysis to identify immediate areas of concern and focus.	
Strategic Outcomes	 The study will contribute to: Key manifesto commitments: We will protect and enhance greenspaces Ending violence against women and girls Our Plan for Barnet: The Safe, Attractive Neighbourhoods and Town Centres and our key outcome of Residents feel safe. Community Participation and out key outcome of Residents feel informed about what the council does Serious Violence Strategic Needs Assessment Parks Strategy Domestic Abuse and Violence against Women and Girls Strategy 2022-2025 Community Safety Strategy 2022-2027 Combatting Drugs Partnership Delivery Plan

Timescales	A report will be presented to the Safer Communities Partnership Board (SCPB) in June which will provide an overview of the existing approach, any identified barriers and engagement with key stakeholders on options to address.
Risks / Constraints	 Lack of engagement from stakeholders across the borough. Data is not validated enough to support future decision making. If the design phase is not inclusive of all individuals in our community, it could result in some barriers not being addressed. Timescales for a report for June may be ambitious if engagement with stakeholders and data gathering is difficult. Obtaining case studies from local authorities with similar demographics may not be feasible/provide sufficient evidence. Resource available to carry out engagement and data gathering.
